- 8. 08 — Administration

01 — Getting started

Sign in

1. Open the app URL (e.g. <http://localhost:4200>).
2. Enter **username** and **password**.
3. Optional: **Remember me** (24 h username recall).
4. After success: **Home** (`/welcome`) or **Platform admin** dashboard.

OOSM expands to **Olive Oil Management System**.

Home dashboard

Shows modules you can access, pending items, and quick links. Click a module card to open its menu.

Sidebar order

Reception → Oil production → Conditioning → Inventory → Finance → Settings

Language

Globe icon: **English, Français, Arabic**.

Global search

Top bar — enter lot/delivery/reference code and press Enter.

Notifications & profile

Bell icon for alerts; avatar for account settings and logout.

Help

? in the toolbar opens the in-app guide.

[02 — Modules overview](#)

02 — Modules overview

Summary of each OOSM module. For detailed French procedures see [../fr/](#).

Technical deep dives (how it works in code & UI): [Frontend](#) · [Backend](#) · [Screen maps](#) · [End-to-end flows](#)

Reception

Record olive and oil deliveries, suppliers, QC, mill planning.

Six operation types: EXCHANGE, SIMPLE_RECEPTION, BASE, OLIVE_PURCHASE, OIL_PURCHASE, payment-in-oil.

→ [Reception workflows \(EN\)](#) | [FR guide](#)

Oil production & storage

Tanks, oil IN/OUT transactions, validation, filtration, containers, recap board.

→ [FR guide](#) | QA: [PROD-*](#)

Conditioning

Manufacturing orders (OF), packaging lines, labels, projects, shipments, analytics.

→ [FR guide](#)

Inventory

Articles, finished products, BOM, stock movements, locations, purchase orders.

→ [FR guide](#) | QA: [INV-*](#)

Finance

Expenses, bank accounts, oil sales (confirm → deliver → invoice → pay), oil credit, waste sales.

→ [Oil sales](#) | [FR guide](#) | QA: [FIN-*](#)

Settings

Company profile, generic types, QC rules, users & roles.

→ [FR guide](#) | QA: [AUTH-*](#)

Platform administration

OOSMADMIN only: companies, tenant onboarding.

→ [FR guide](#)

Typical end-to-end flow

```
graph LR; A[Reception] --> B[Production (tanks)]; B --> C[Conditioning (OF)]; C --> D[Shipment]; A --> E[Finance]; B --> F[Inventory (packaging)]; C --> G[ ];
```

Reception → Production (tanks) → Conditioning (OF) → Shipment

↓ ↓ ↓

Finance Inventory (packaging)

Permissions

Menus and buttons require `MODULE:ENTITY:ACTION` permissions. Missing access → contact your company admin or see [Permissions guide](#).

03 — Production & storage

Manage **tanks**, **oil movements** (IN/OUT), **filtration**, **containers**, and the recap board.

Overview

Oil production → dashboard / recap (`/storage/storage_recap`) — levels per tank, capacity alerts.

Storage units (tanks)

1. **Tank list** — capacity, current level, oil type.
2. **Create** — name, max capacity, location, allowed variety.
3. **Edit** — watch existing movements.

Oil transactions

Each IN/OUT transfer between tanks, containers, or sales.

Action	Description
IN	After oil reception or milling
OUT	Sale, conditioning, loss
Validate	Some movements need supervisor approval

Workflow: create → save/submit → **validate** → stock updated → PDF if available.

Filtration

Record filtration linked to lot/tank; post-filtration QC.

Oil containers

Barrels, IBC — create, assign, link to oil sale.

Links

Source	Link
--------	------

Oil reception	Tank IN
Finance — oil sale	Stock OUT on delivery
Conditioning	Bulk oil for manufacturing orders

→ Screen map · PROD-* QA

04 — Conditioning

CONDITIONING module: manufacturing orders (OF), lines, labels, customer projects, shipments, analytics.

Manufacturing orders (OF)

1. **OF list** (/of) — draft, in progress, completed.
2. **Create OF** — finished product, BOM, quantity, optional project.
3. **OF QC** — if configured before closure.
4. **Close** — consumes inventory; finished goods in stock.

Lines, labels, projects

- **Lines** — production line setup
- **Labels** — legal text, product link, traceability PDF/QR
- **Projects** — group OFs for a customer (distinct from reception suppliers)
- **Shipments** — outbound finished goods

Analytics

Yield, quality, BOM gap, filtration efficiency (if permitted).

Best practices

- Update **BOM** before launching OF.
- Link **source oil lot** for traceability.
- Validate **label** before export shipment.

→ [Screen map](#)

05 — Inventory

Articles (packaging), **finished products**, **BOM**, **stock movements**, **locations**, **purchase orders**.

Dashboard

`/stock/dashboard` — summary and low-stock alerts.

Articles & products

Entity	Use
Articles	Packaging, consumables
Products	Finished SKUs
BOM	Components per finished product

Movements

IN (purchase, return), OUT (OF consumption, adjustment), audit journal.

Locations & purchase orders

Warehouse locations; **purchase orders** → receipt → automatic IN movement.

Material suppliers are separate from olive/oil reception suppliers.

Conditioning link

Closing an **OF** decrements BOM components when configured.

→ INV-* QA

06 — Finance

FINANCE: expenses, transactions, bank accounts, **oil sales**, **oil credit**, waste sales.

Dashboard

`/finance` — receivables, unpaid sales, treasury indicators.

Oil sales cycle

1. **Create sale** — client, lines, optional containers
2. **Confirm** — locks quantities
3. **Deliver** — stock OUT
4. **Invoice** — PDF
5. **Collect payment** — full or partial

→ [Oil sales domain guide](#)

Other areas

- **Expenses** — operating costs
- **Transactions** — ledger linked to business records
- **Bank accounts** — balance from transactions
- **Oil credit** — supplier oil balance
- **Waste sales** — by-products

→ [FIN-* QA](#) · [Finance screen map](#)

07 — Settings

HABILITATION / Settings — tenant company administrators.

General configuration

Company identity, logo, currency, UI options (</settings/general-config>).

Generic types & QC rules

Reference lists (regions, varieties) and QC thresholds for olive/oil controls.

Users & roles

Create users, assign roles, permissions from role catalogue.

Security: least privilege, disable leavers, force password change for new accounts.

User profile

My account — photo, email, password change.

→ [AUTH-* QA](#) · [Permissions deep dive](#)

08 — Administration

OOSMADMIN accounts only — multi-tenant platform operators.

Access

After login → `/administration/dashboard` (not the standard mill menu).

Functions

Function	Description
Admin dashboard	Cross-tenant view
Companies	Create / activate / deactivate tenants
Platform users	OOSM admin accounts
Onboarding	New company + tenant admin

Tenant vs platform

	Tenant (mill)	Platform
Data	One company	All companies
Menu	Reception → Finance	Administration
Role	ADMIN, USER	OOSMADMIN

Inactive company → tenant users cannot log in.

OSM → OOSM migration

Legacy `osmuser` copied to `oosmuser` on backend startup. Local script:
`oosm/scripts/setup-local-login.ps1` .

→ [Technical migration](#)
